**Interpretation**

Distraction Index (DI): The laxity ranking is based on the hip with the greater laxity (larger DI). In this case the DI used is 0.29.  
 OA Risk Category: The DI is less than or equal to 0.30. This patient is at minimal risk for hip OA.  
 Distraction Index Chart:

**BREED STATISTICS:** This interpretation is based on a cross-section of 1867 canine patients of the GREAT DANE breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.20 - 0.61) for the breed. The breed average DI is 0.37 (solid square). The patient DI is the solid circle (0.29).

**SUMMARY:** The degree of laxity (DI = 0.29) falls within the central 90% range of DIs for the breed. This amount of hip laxity places hip at a minimal risk to develop hip OA. No radiographic evidence of OA for either hip.
